Title of the project

F&S' Webshop

Problem description

Clothing is a very essential part of a person's life. Without certain clothes you cannot present yourself in the outside world. They keep us people warm, protect us from environmental influences and nowadays it is unimaginable to go out anywhere without clothes, for example. Over the years, clothing has acquired another characteristic besides its protective function: It became a way of self-expression.

Solution description

In most cases, fashion is either seen as a socio-psychological phenomenon or analyzed as a great economic factor. In both cases the main thing is "clothing".

So, in this project we want to create an online webshop/e-shop, where people can buy different kind of clothes. There will be a large selection of clothes like shoes, jackets, trousers, etc. and these clothes are mainly targeted for adults.

Technical environment

SW: HTML, CSS, JavaScript, PHP, Django, JQuery, Bootstrap, etc.,

HW: PC/Notebook

Other remarks

This project could also be used in further projects, for example if we want to create our own brand and publish it on the website.
